

SkyTrack Weather App Documentation

Introduction

Welcome to SkyTrack, your ultimate weather companion. SkyTrack provides real-time weather updates, forecasts, severe weather alerts, and radar imagery to keep you informed and prepared.

Installation and Initial Setup

1. **Download the App:** SkyTrack is available on both iOS and Android platforms. Visit the App Store or Google Play Store, search for 'SkyTrack', and tap 'Install'.
2. **Launch SkyTrack:** Open the app and grant necessary permissions for location access to receive accurate weather updates.
3. **Set Preferences:** Customize your unit preferences (Celsius/Fahrenheit), notification settings, and home location for personalized weather information.

Navigating the SkyTrack App

- **Home Screen:** Displays current temperature, weather conditions, and a brief forecast.
- **Hourly Forecast:** Access detailed hourly weather changes, including temperature, humidity, and wind speed.
- **Daily Forecast:** View a 7-day weather forecast with insights into daily highs, lows, and precipitation expectations.
- **Radar Maps:** Tap on the Radar tab to view real-time weather patterns and track storms.

Key Features

- **Real-Time Weather Updates:** Provides up-to-the-minute weather conditions.
- **Severe Weather Alerts:** Receive push notifications for severe weather, ensuring you stay safe and prepared.

- **Customizable Widgets:** Add widgets to your home screen for quick weather access.

Customization Options

- **Themes:** Personalize the app's appearance with light or dark modes.
- **Alerts:** Set thresholds for temperature changes and severe weather alerts tailored to your preferences.

Troubleshooting

1. **App Crashing:**
2. **Clear Cache:** Go to your phone's settings, find 'SkyTrack', and clear the cache.
3. **Reinstall the App:** If clearing the cache doesn't work, uninstall SkyTrack and reinstall from the store.
4. **Location Issues:** Ensure location services are enabled and permission is granted to SkyTrack.

FAQs

- **Q: Why is the location not accurate?** A: Ensure that location services are enabled and set to high accuracy.
- **Q: How can I change the temperature unit?** A: Go to settings and choose between Celsius and Fahrenheit.

Updates

Stay up to date with the latest versions for enhanced features and security by enabling automatic updates in your device's app settings.

Support
