

SpeedyWave H500 Wi-Fi Router Documentation

Introduction

The SpeedyWave H500 is designed to provide high-speed internet connectivity across multiple devices. Featuring dual-band support, it ensures seamless streaming, gaming, and browsing.

Hardware Specifications

- **Antennas:** 4 External Antennas
- **Frequency Bands:** 2.4GHz and 5GHz
- **Ethernet Ports:** 4 LAN, 1 WAN
- **LED Indicators:** Power, Internet, Wi-Fi, LAN Port Status
- **Dimensions:** 200mm x 130mm x 35mm

Setting Up Your Router

1. **Connection:** Connect the WAN port to your modem using an Ethernet cable. Connect the power adapter and switch on the router.
2. **Accessing Admin Interface:** Connect to default Wi-Fi (SSID: SpeedyWave_H500), open a browser, enter `192.168.0.1`. Use `admin` for username and password.
3. **Initial Setup:** Follow the setup wizard to configure your network name (SSID) and password.

Network Configuration

- **Basic:** Name your Wi-Fi and secure it with WPA3.
- **Advanced Settings:** Utilize parental controls, set up guest networks, and prioritize bandwidth using QoS settings.

Troubleshooting Common Issues

- **Connection Drops:** Restart the router. Check for interference. Update firmware if issues persist.

- **Slow Speeds:** Ensure the router is not obstructed. Limit connected devices. Test both frequency bands.
- **LED Indicators:** Refer to the LED Indicator section for meaning and troubleshooting.

Exploring Additional Features

- **Dual-Band:** Automatically switch between 2.4GHz and 5GHz for optimal performance.
- **App Support:** Download the SpeedyWave app for iOS and Android to manage settings remotely.

Ensuring Security

- **Firewall Setup:** Enable firewall through the admin interface.
- **Periodic Checks:** Schedule regular updates to maintain security standards.

Customer Support
